trifectiv® plus WOUND & BURN CARE

BURNS

DEEP PARTIAL THICKNESS BURN **FROM A VELD FIRE**

Context: Deep partial-thickness burns of the hand after a veld fire. Silver sulphadiazine dressings were used first. The hand remained infected and inflamed.

Treatment Plan: Standard burn dressings were used for 16 days. Trifectiv® Plus closed dressings were then started. Infection, biofilm and inflammation were markedly reduced within four days.

Results: The hand healed within two weeks of starting Trifectiv® Plus.

Tip: Trifectiv® Plus contains no additives or fillers. Premium-grade hypochlorous acid is the same molecule produced by white blood cells. It can be used in adults, children and during pregnancy.
