trifectiv® plus WOUND & BURN CARE

ACUTE WOUNDS

DEGLOVING INJURY
BELOW THE RIGHT KNEE

Context: A 91-year-old woman in frail care fell and sustained a degloving injury of the anterolateral aspect of the right leg, just below the knee. Staff cleaned the wound with saline and replaced the skin flap as a free graft. The graft failed.

Treatment Plan: The closed Trifectiv® Plus dressing method was used. The wound was sprayed with Trifectiv® Plus. Five layers of Trifectiv-wetted gauze were placed directly onto the wound and retained with a crepe bandage. The dressing was changed daily.

Results: Infection, biofilm and inflammation cleared rapidly. The wound was fully healed within 40 days.
