trifectiv® plus WOUND & BURN CARE

ACUTE WOUNDS

DEGLOVING INJURY **OF THE KNEE**

Context: The patient sustained a degloving injury of the knee - skin and subcutaneous tissue torn away from the underlying muscle and fascia.

Treatment Plan: The wound was sprayed with Trifectiv® Plus. A single layer of non-medicated paraffin gauze was applied, followed by three to five sheets of Trifectiv-wetted gauze, and secured with a crepe bandage. The dressing was changed daily.

Results: The wound was fully healed within eight weeks of starting treatment.

Premium-grade hypochlorous acid, the active ingredient in Trifectiv® Plus, supports healing across wound types, particularly where multidrug-resistant infection is a risk. Trifectiv® Plus is effective against MRSA, Pseudomonas, Candida, CRE and human coronavirus, among others.
