trifectiv® plus WOUND & BURN CARE

CHRONIC WOUNDS

DIABETIC FOOT ULCER

Context: A diabetic foot ulcer with necrosis and slough on the plantar / peri-ulcer skin at presentation.

Treatment Plan: The ulcer was sprayed with Trifectiv® Plus. Trifectiv-wetted gauze was applied, held with a bandage and a compression or offloading device as the circulation allowed, and changed daily.

Results: By week 7 the ulcer had closed.

Tip: Clear infection, biofilm and inflammation first. The ulcer will not close while those three remain. Offload the foot or it will reopen.
