trifectiv® plus WOUND & BURN CARE

ACUTE WOUNDS

DOG BITE
OF THE LOWER LIP

Context: A woman was bitten on the lower lip by a dog. Day 1 shows a through-and-through laceration with crusting and early suture marks.

Treatment Plan: The lip was left open and thoroughly irrigated with Trifectiv® Plus and then sprayed several times a day. The solution was allowed to dry. No other creams or ointments or antibiotics were used.

Results: By day 7 the laceration had closed. A small residual mark remained on the lip.

Tip: On the lip: spray and leave open. Do not use other treatments on it. Premium-grade hypochlorous acid is the same molecule produced by white blood cells and has powerful anti-infective, anti-biofilm and anti-inflammatory properties. Treatment is comprehensive yet simple, with very little resultant scarring.
