trifectiv® plus WOUND & BURN CARE

BURNS

PARTIAL THICKNESS
BURNS OF THE TRUNK

Context: An extensive partial-thickness burn of the back and flanks. Day 1 shows erythema and absent epithelialisation.

Treatment Plan: Trifectiv® Plus was sprayed over the burn. Where a dressing would stay, paraffin gauze and Trifectiv-wetted gauze were applied and changed daily.

Results: By day 2 erythema and exudate had reduced, and early epithelialisation was visible.

Tip: On a large partial-thickness burn, spray first. Dress only the areas that will take a bandage. Biofilm is what keeps these wounds wet and angry. Clear the biofilm to support healing.
