trifectiv® plus WOUND & BURN CARE

BURNS

INFECTED BURN WOUND ON A DOG

Context: A dog sustained a burn to the coat. Day 1 shows an open, sloughy wound, which is infected and inflamed.

Treatment Plan: The wound was sprayed with Trifectiv® Plus. Gauze wet with Trifectiv was applied where a dressing would stay and changed daily. The owner continued the dressings at home.

Results: By day 7 the slough had lifted, and a clean, pink wound bed was established.

Tip: Clip the fur back from the edges so the solution reaches the wound. A wet dressing that the dog cannot pull off is worth more than spray application, which the coat absorbs.
