trifectiv® plus WOUND & BURN CARE

ACUTE WOUNDS

NON-HEALING LOWER-LEG ULCER

Context: An elderly woman presented with a lower-leg ulcer that had not responded to treatment from her GP.

Treatment Plan: The ulcer was sprayed with Trifectiv Plus and left for a minute. Three to five sheets of gauze, wet (not dripping) with Trifectiv Plus, were packed into the wound. A crepe bandage held the pack, with a compression stocking over it. The dressing was changed daily. She was encouraged to walk.

Results: Infection, biofilm and inflammation settled. The ulcer closed within two months.

Tip: Use woven gauze and pack it firmly. Necrotic tissue and biofilm come away with each dressing change.
