trifectiv® plus WOUND & BURN CARE

SHINGLES

Context: A 41-year-old man presented with painful, inflamed herpes zoster on the back.

Treatment Plan: Trifectiv® Plus was sprayed onto the lesions every two to three hours and left to dry. It was not rubbed in. He also received oral analgesia and antiviral therapy.

Results: The lesions healed without scarring or pigment change.

Tip: Do not put other creams or sprays on the rash. Spray Trifectiv® Plus only and leave it to dry.
